

[Steve Yegge's blog post](#) on how to ace the Google interview (I highly recommend reading the whole thing) as well as [this blog post by Milad Nasari](#).

I highly recommend practicing your code on challenge websites like [Project Euler](#), [Interviewing.io](#), [Topcoder](#), [HackerRank](#), and [LeetCode](#). Try timing yourself through the problems, ranging from easy to the most difficult.

You may also want to practice coding in a Google Doc (This is what we use for the initial phone interview!)

Google has created a "Life at Google" video series that provides an [Overview of the Hiring Process, Preparing](#) for a Google Engineering Interview, and a [Mock Coding/Engineering Interview](#).

I recommend viewing the preparation/mock interview videos as they break down what our engineers are looking for in a technical phone interview.

Here is this [pre-recorded session](#) that will show you how to prepare for onsite coding! (If we move to onsite, be sure to ask for coding coaching lessons.)

Best of luck,
Anima Sharma
